# Assignment 3

NAME :- RAVI SHANKAR
ROLL NO :- 200778

## Topic :- simulation of the temperature profile in a continuously heated pipe, with steady flow

### Code

```
import numpy as np
import matplotlib.pyplot as plt
pi = 3.14159
L = int(input("Enter the length: "))
r = float(input("Enter the radius: "))
n = int(input("Enter n: "))
m = int(input("Enter the mass flow rate: "))
Cp = int(input("Enter Cp: "))
rho = int(input("Enter the density: "))
Ti = int(input("Enter the initial temperature: "))
T0 = int(input("Enter T0: "))
q_flux = int(input("Enter flux "))
t_final = int(input("Enter final T: "))
dt = int(input("Enter dt: "))
dx = L/n
x = np.linspace(dx/2, L-dx/2, n)
T = np.ones(n)*T0
dTdt = np.zeros(n)
t = np.arange(0, t_final, dt)
for j in range(1,len(t)):
  plt.figure(1)
  plt.clf()
  dTdt[1:n] =
(m*Cp*(T[0:n-1]-T[1:n])+q_flux*2*pi*r*dx)/(rho*Cp*dx*pi*r**2)
  dTdt[0] = (m*Cp*(Ti-T[0])+q_flux*2*pi*r*dx)/(rho*Cp*dx*pi*r**2)
  T = T + dTdt*dt
  plt.figure(1)
  plt.plot(x,T, color = 'blue', label = 'Transient')
```

```
  plt.xlabel('Distance (m)')
  plt.ylabel('Temperature (K)')
  plt.legend(loc = 'upper left')
  plt.show()
  plt.pause(0.005)
```

## Input

```
Enter the length: 50
Enter the radius: 0.01
Enter n: 100
Enter the mass flow rate: 3
Enter Cp: 4180
Enter the density: 1000
Enter the initial temperature: 400
Enter T0: 300
Enter flux 100000
Enter final T: 700
Enter dt: 1
```

## Temperature profile as a function of time and space
